## Project Firstline Diarrhea Education Packet

- Diarrhea is liquid stool. All stool is full of germs. Diarrhea can be caused by a lot of things, but it is sometimes a sign of a pathogen that can cause illness, even in healthy people.
- Infections that cause diarrhea spread because germs move easily between hands, equipment, and surfaces in health care. Some of these germs can be difficult to kill.
- Common examples of infections that cause diarrhea include C. difficile, norovirus, and rotavirus (especially in children).
